hypothetical protein - Deinococcus radiodurans (strain R1)
C;Species: Deinococcus radiodurans
C;Dacies: Deinococcus radiodurans
C;Dacession: H75457.
R;White, O.; Eisen, J.A.; Heidelberg, J.F.; Hickey, E.K.; Peterson, J. M.; Shen, M.; Vamathevan, J.J.; Lam, P.; McDonald, L.; Utterback, T. Science 286, 1571-1577, 1999.

tyrosine 3-monooxygenase (EC 1.14.16.2) type 1 and 2 - Japanese macaque NyAlternate names: oxygen oxidoreductase; tetrahydropteridine; tyrosine C;Species: Macaca fuscata (Japanese macaque)
C;Date: 03-May-1994 #sequence_revision O'Oct-1994 #text_change 31-Mar-C;Date: 03-May-1994 #sequence_revision O'Oct-1994 #text_change 31-Mar-C;Accession: PN0593
R;Ichinose, H; Ohye, T: Fujita, K.; Yoshida, M.; Ueda, S.; Nagatsu, Psichense, H; Ohye, T: Fujita, K.; Yoshida, M.; Ueda, S.; Nagatsu, A;Title: Increased heterogeneity of tyrosine hydroxylase in humans.
A;Reference number: PN0575; MUID:93371398; PMID:7689834
A;Accession: PN0593
A;Molecule type: genomic RNA
A;Residues: 1-45 <ICH>A;Accession: RNO393
A;Molecule type: genomic RNA
A;Residues: 1-45 <ICH>A;Experimental source: kidney
C;Comment: This enzyme catalyzes the first and rate-limiting step of C;C;Superfamily: phenylalanine 4-monooxygenase
C;Keywords: biopterin; monooxygenase; oxidoreductase
tyrosine 3-monooxygenase (EC 1.14.16.2) type 1 and 2 - common gibbon (f N;Alternate names: oxygen oxidoreductase; tetrahydropteridine; tyrosine c;Species: Hylobates lar (common gibbon, white-handed gibbon) (c;Date: 03-May-1994 #sequence_revision 07-Oct-1994 #text_change 31-Mar-C;Accession: PNO592 Ps;Ichinose, H.; Ohye, T.; Fujita, K.; Yoshida, M.; Ueda, S.; Nagatsu, T.; Tichinose, Blophys. Res. Commun. 195, 158-165, 1993 A;Title: Increased heterogeneity of tyrosine hydroxylase in humans. A;Reference number: PNO575; MUID:93371398; PMID:7689834
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  antifreeze protein A precursor - winter flounder

A/Cross-references: GB:U19368; NID:g624684; FIDN:AAA87172.1; PID:g624
A/Experimental source: smooth muscle
C/Comment: This protein is synthesized in a wide range of tissues in
entiation, modulation of actin microfilament dynamics and smooth musc
C/Superfamily: alpha-crystallin
C/Keywords: heat shoots, phosphoprotein; stress-induced protein
F/66-75/Region: alanine-rich
F/15,82,86/Binding site: phosphate (Ser) (covalent) (by MAP kinase II
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Science 282, 2012-2018, 1998

Glycinin A3B4 - soybean (cv. Mandarin) (fragment)
N;Alternate names: 11S globulin; basic and acidic chains
C;Species: Glycine max (soybean)
C;Date: 10-Mar-1994 #sequence_revision 28-Oct-1994 #text_change 28-Oct-1901
C;Accession: PQ0806
C;Accession: PQ0806
C;Accession: PQ0806
C;Accession: PQ0806
A;Title: An attempt to elucidate the origin of cultivated soybean via genitor, Glycine soja.
A;Title: An attempt soja.
A;Reference number: PQ0806
A;Molecule type: mRNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  transcription regulator, gntR family BMEII0352 [imported] - Brucella m C;Species: Brucella melitensis
